

# Clean, hygienic and safe facilities for your staff and customers

During this Covid-19 crisis, many facilities will have been closed up for many weeks. Cleaning and maintenance regimes should now be ramped up to ensure your premises are clean, hygienic and safe and to provide reassurance to your returning staff and customers.

## Deep Cleaning

Now is the time to deep-clean buildings, focusing on high touch point areas such as door handles and washrooms, so that your staff and customers can feel confident they are returning to a hygienically clean workplace.

As an essential services provider of cleaning and decontamination services, OCS is trusted by hospitals, medical centres, airports, airlines and government to deliver Covid-19 level decontamination cleaning, deep cleaning and sanitising.

## HVAC and Water Quality

Maintaining good water quality to control the risks from legionella bacteria and other water borne pathogens is essential for all responsible businesses. At a time when places of work have closed their doors to comply with government guidance to protect Australia from Covid-19, there is a higher risk of stagnant water in buildings hot and cold water systems, cooling towers and evaporative condensers, allowing bacteria to grow to dangerous levels.

Our network of qualified technicians can assess and service your building's HVAC and water systems to ensure they are safe and you are meeting your obligations in relation to water quality and the control of harmful bacteria in the workplace.

OCS is trusted by government, healthcare, aviation, education, retail and commercial customers to deliver best in class cleaning and facilities management services. We provide:

- Extensive nationwide capability
- Fully trained operatives
- Strict health and safety compliance
- Chemicals and methodology that meet Department of Health guidelines and are TGA approved as effective against Covid-19
- Personal protective wear in line with Department of Health guidelines
